### Skills

---

I have been coding video games ever since I was twelve years old. I wanted to learn how to make my own games and I have been making 3D and 2D games ever since on my free time as a hobby. I have learned and practiced with many different coding languages such as Java, C#, Python, and HTML.

---

### Experience

---

#### Software Engineer

NOVEMBER 2017 - Dublin High School, CA

I have always enjoyed coding ever since I was younger when I was teaching myself how to make my own simple platformer games. I have familiarized myself with a variety of languages and programs.

#### Robotic Engineer / Mechanical and Software Director

JANUARY 2015- JUNE 2017, Fallon Middle School CA

For over three years I have been working with Lego NXT robots and currently own an EV3 robot that I practice coding and building on. Back in middle school our team won the robotics tournament of completing challenges and we got featured on the school's home page of their website.

#### Filmmaker and Producer / Editor and Filmer

FEBRUARY 2012 - NOVEMBER 2017, DUBLIN, CA

I currently edit and produce my own content and films for my channel on YouTube. I have entered film contests and create animations/videos for school projects. I have been studying and improving my editing and videography work for over 5 years each week, constantly increasing the quality of the videos I create. I strive to make content that when I look back on it, it will be something that I will be proud of years later.

---

## Education

---

### Dublin High School / Freshman

August 2017 - June 2017 Dublin, CA

I work to put in the best effort in all my school assignments. I currently stand strong with straight A's in all my classes continuing from middle school where I constantly made Principal's Honor Roll each year. I believe in trying multiple times to get the result you are happy with. I don't give up the moment something challenging comes my way. I find another way to solve the problem I am stuck with and move forward.

### Film and Editing Classes

August 2016 - October 2017 Dublin, CA

For two years in a row over the summer I have been working on making professional films and videos for others to enjoy by also learning the tips and techniques to make my films look even better. I am always open to learning something new especially if it will be beneficial to use in the future of my career or when I create my next videos every week.

---

## Awards

---

I have won many awards such as winning my 7th grade robotics tournament against other schools and showing up on the front page of the school's website

I won awards for my art and computer drawing skills two years straight against all other school's in the state ending up in the newspaper of the schools around town

I made video games that won awards for their creativity and high graphic design put into the levels I made. Many others have commented that the quality of the graphics and storyline is very impressive several times on each of my games that I have made with different game engines.
